60:00 [3]

Part one:

INTRODUCTION TO RDM AND
DATA MANAGEMENT
PLANNING

What do we mean by

RDM?

RESEARCH

DATA

MANAGEMENT

RDM helps to preserve, protect and proliferate the data behind scientific (research) discoveries and claims

RDM leads to increased transparency of the research process

RDM done well can make it easier to verify research and reproduce findings

RDM and sharing (anonymised) research data can lead to making more progress as a research community collectively

What are core RDM activities?

Planning and describing data-related work before it takes place***

Documenting your data (and processing/workflows) so that you and others can find and understand it

Choosing open (or at least standardised) file formats where possible

Storing data safely during a project

Depositing data in a trusted repository at the end of research

Linking publications to the datasets that underpin them and increasingly code/scripts too

Why bother with data management?

An aerial photograph of a large, multi-story research facility. A central building is engulfed in flames, with thick black smoke billowing upwards and spreading across the sky. The surrounding area includes other large buildings, parking lots, and green spaces. The overall scene depicts a major disaster at a research center.

2005/10/30:

Fire destroys Southampton research centre

150,000 arrest records wiped in tech blunder

Offenders may go free after software bug deletes fingerprint and DNA files on police computer

Fiona Hamilton, Crime and Security Editor

Types of research data

Observations

Survey data

Recordings

Transcriptions

Digital photographs

Simulation data

Big, new, novel or voluminous data

Scientific measurements

MRI data

NVivo data

International macrodata

Census data

Code / scripts

Project web site

Data sharing: often means publishing (anonymised) research data in an open repository **AFTER** your research. Other meanings also.

Data sharing agreement: a legal agreement between two organisations for sharing personal data. Read *Data sharing code of practice* from ICO. Seek legal advice.

TERMINOLOGY

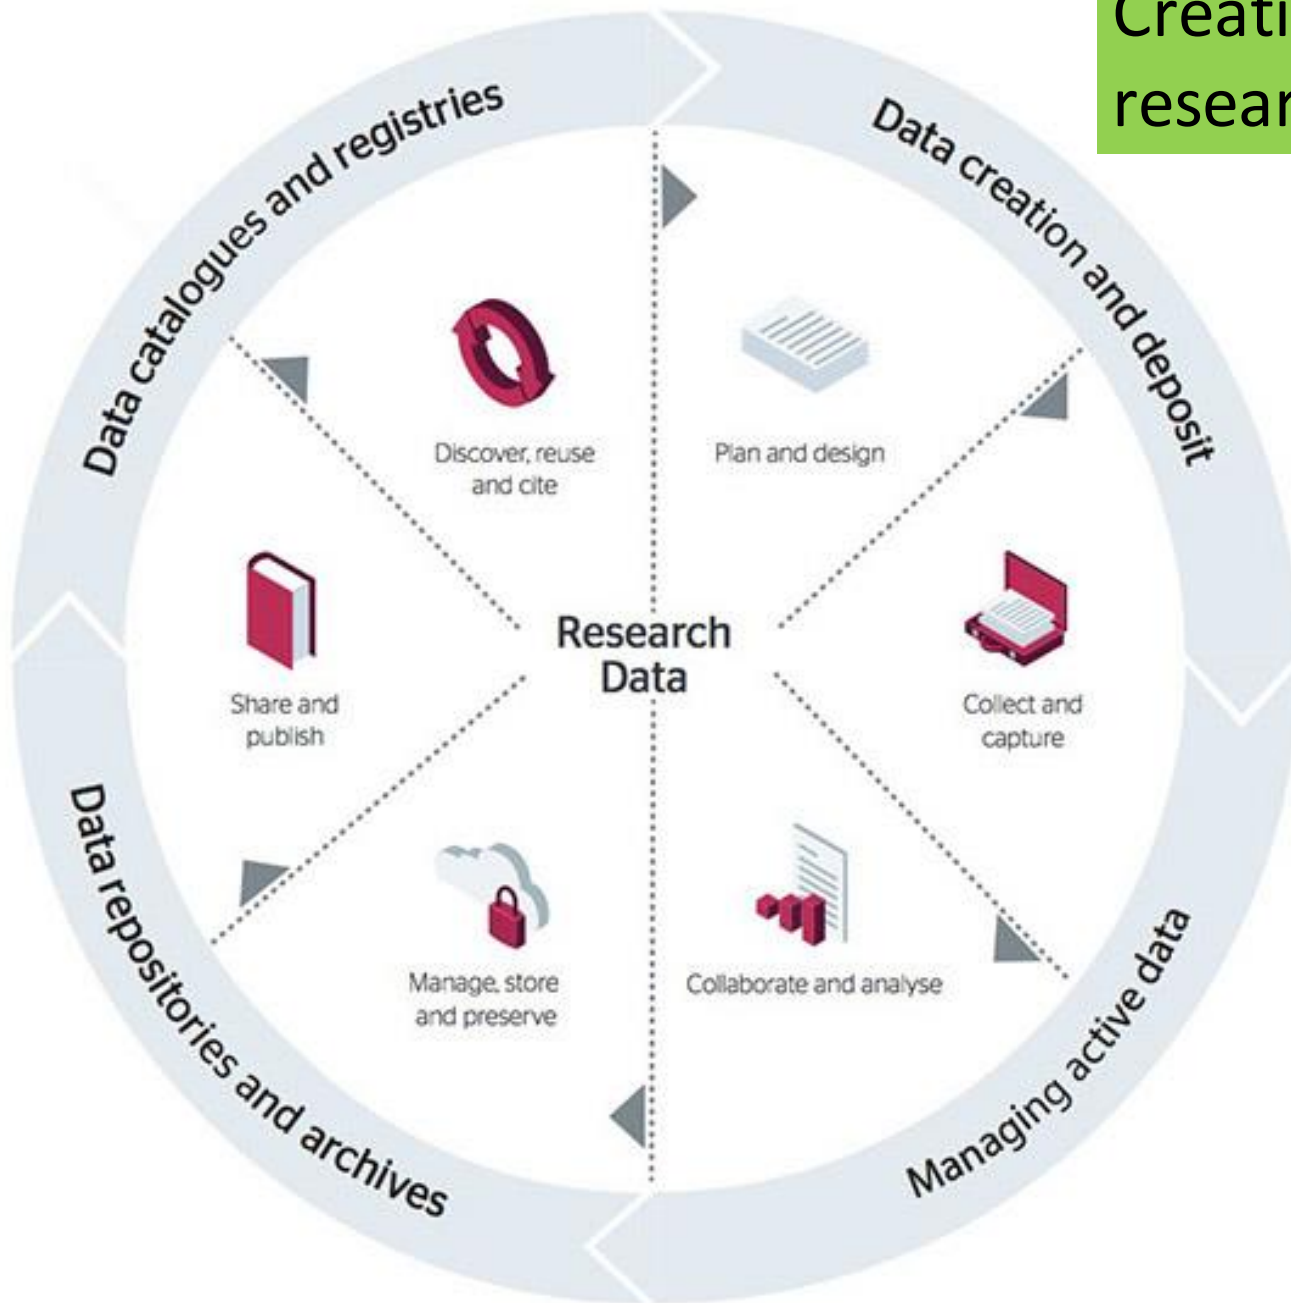

Short-term storage: the place you keep your research data **DURING** your project. E.g., OneDrive for Business

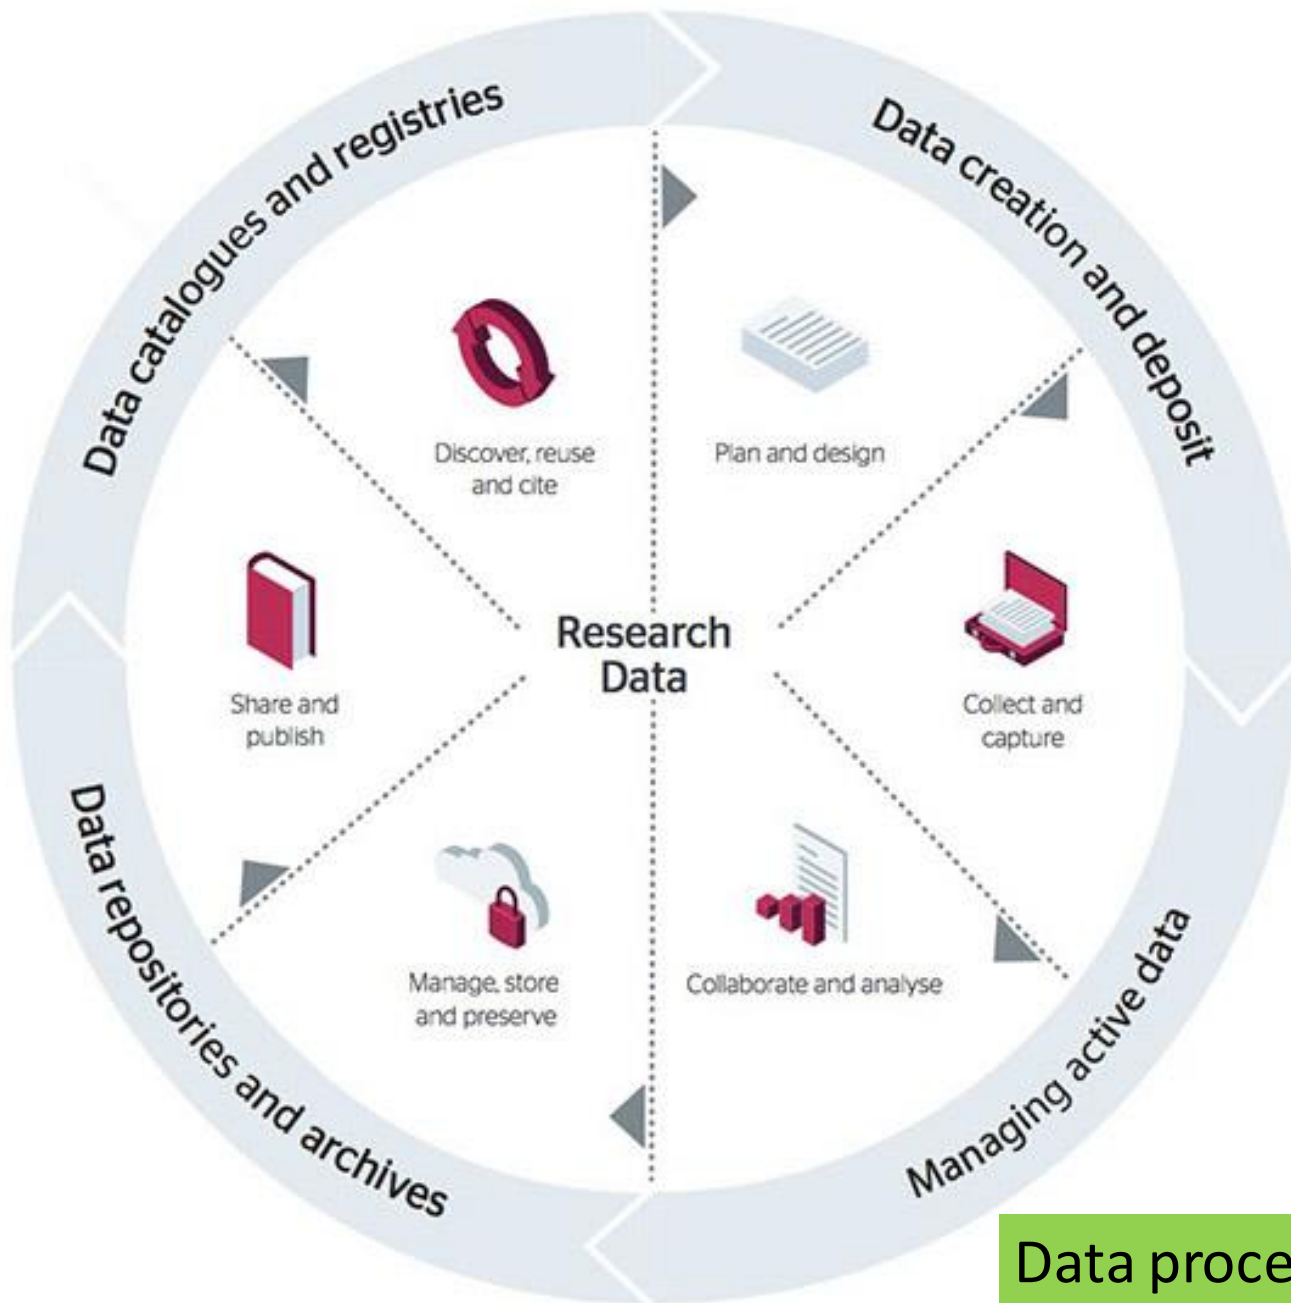

Long-term storage: the place you deposit your research data **AFTER** your project. E.g., **data repository** (subject-specific; multidisciplinary; or institutional)

Research data lifecycle

Creation of research data

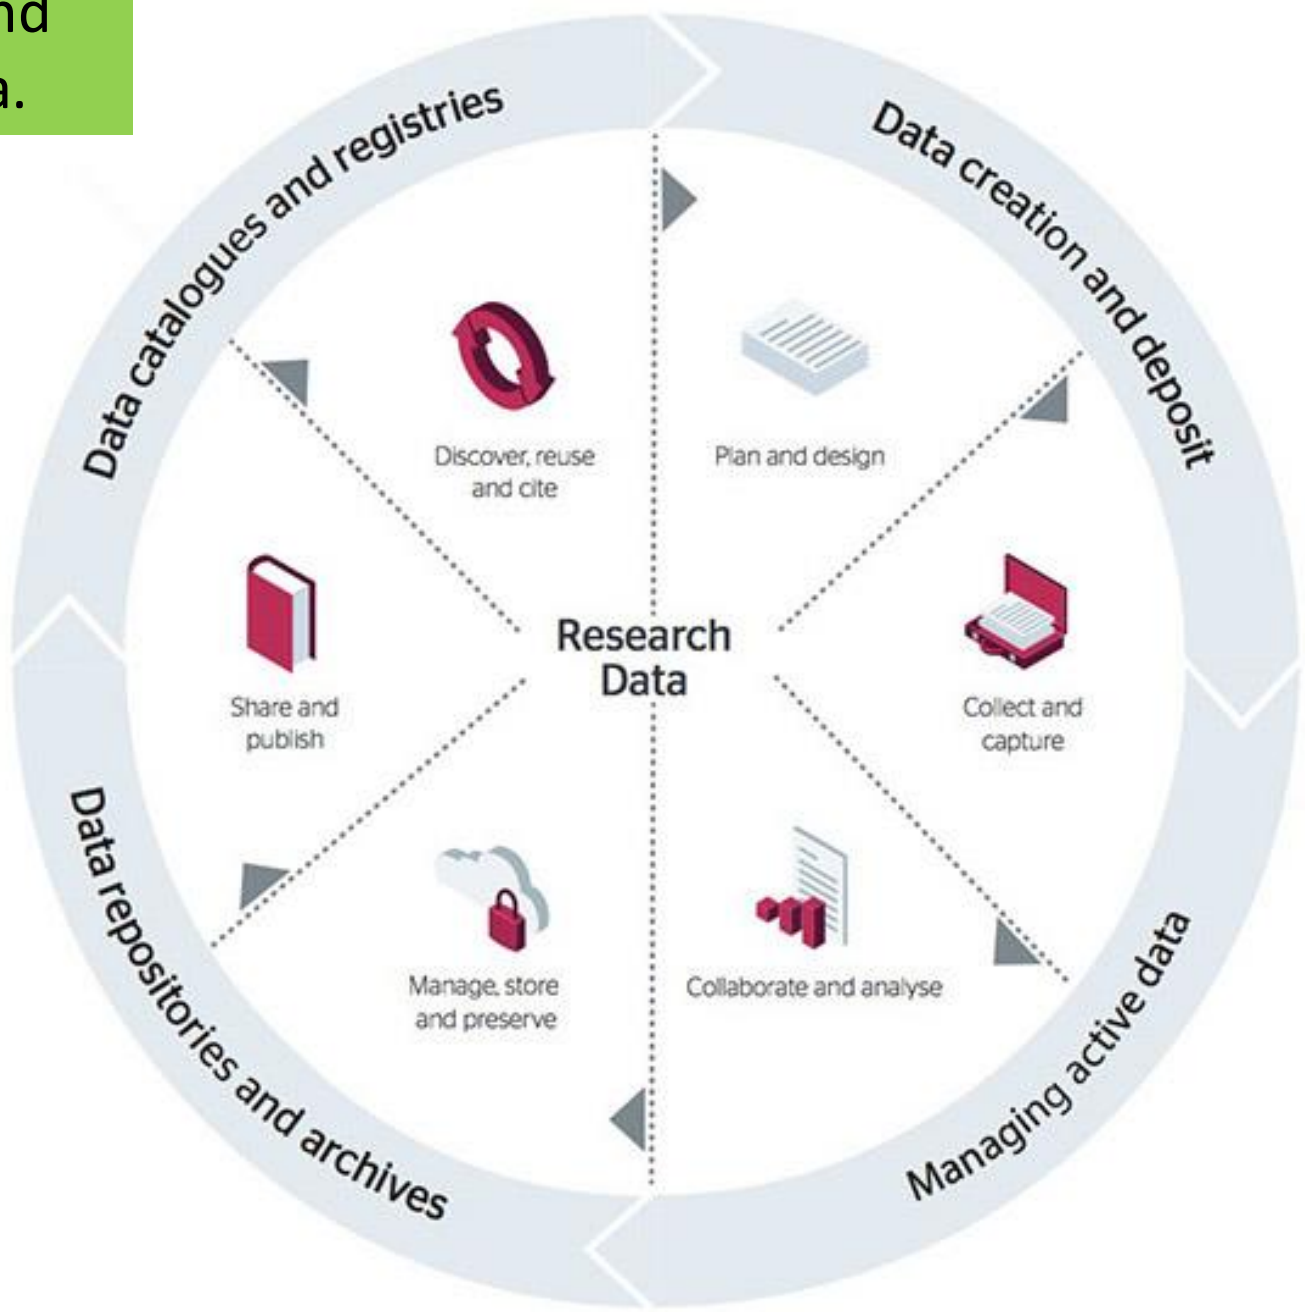

Data processing
and analysis

Publish data by deposit in a repository. Mint a DOI. Link data with research paper.

Discover and re-use data.

UKRI COMMON PRINCIPLES
ON DATA POLICY

UKRI provides guidance on best practice in the management of research data

Principle 1.

Publicly funded research data are a public good, produced in the public interest, which should be made **openly available** with as few restrictions as possible in a timely and responsible manner.

Principle 2.

Institutional and project specific data management policies and **plans** should be in accordance with relevant standards and community **best practice**. Data with acknowledged **long-term value** should be **preserved** and remain **accessible** and **usable** for future research.

Principle 3.

To enable research data to be **discoverable** and effectively **re-used** by others, sufficient **metadata** should be recorded and made openly available to enable other researchers to **understand** the research and **re-use** potential of the data. Published results should always include information on how to **access** the supporting data.

Principle 4:

UKRI recognises that there are **legal, ethical and commercial constraints** on release of research data. To ensure that the research process is not damaged by inappropriate release of data, research organisation policies and practices should ensure that these are considered at all stages in the research process.

Principle 5.

To ensure that research teams get appropriate **recognition** for the effort involved in collecting and analysing data, those who undertake Research Council funded work may be entitled to a **limited period of privileged use** of the data they have collected to enable them to publish the results of their research. The length of this period varies by research discipline and, where appropriate, is discussed further in the published policies of individual Research Councils.

Principle 6.

In order to recognise the intellectual contributions of researchers who generate, preserve and share key research datasets, all users of research data should **acknowledge the sources of their data** and abide by the terms and conditions under which they are accessed.

Principle 7

It is **appropriate to use public funds** to support the management and sharing of publicly funded research data. To maximise the research benefit which can be gained from limited budgets, the mechanisms for these activities should be both efficient and cost-effective in the use of public funds.

TEN RULES
FOR A GOOD
DMP

1. Determine
FUNDER
requirements

2. IDENTIFY the data to be collected

Anticipated types of data

Anticipated file formats: open preferred

Anticipated volume of data in bytes

Planned storage and access

Data output	Output type	Format(s)	Planned storage and access
Raw ethnographic fieldnotes	Notebooks	Non-digital	No shared access to these data.
Photographs	Digital images	JPEG format	OneDrive for Business
Interviews	Sound recordings	MP3 format	Destroyed after transcription

A background of numerous colorful pencils (red, blue, green, yellow, orange, purple, pink, etc.) arranged in a circular pattern, pointing towards the center. The pencils are sharp and vibrant, creating a dynamic and organized visual.

3. State how data will be

ORGANISED

Spreadsheet

Database

Geographic information system

Nvivo

Qualtrics

Structured metadata e.g., DDI

Technical descriptions

Comments in code / scripts

Audit trail supporting technical decisions

4. Explain how data will be

DOCUMENTED

QA during data collection phase

QA during data entry phase

QA during data analysis phase

High
Quality

5. Describe how data

QUALITY

will be assured

6. Provide a solid
STRATEGY for
short-term data
storage and long-
term data storage

7. Define the project's data

POLICIES

Data (and software) licencing

Anticipated plans for data sharing

Management of personal data

Deposit in an open data repository

Submit data to a journal

Publish a data paper

8. Describe how data will be
DISSEMINATED

9. Assign ROLES and RESPONSIBILITIES

A network diagram with colorful pins representing nodes and roles. The pins are connected by thin lines, forming a complex network. The colors of the pins include red, green, yellow, blue, purple, and orange. The background is a light gray grid.

Data collector

Quality control

Data analyst

Data visualisation

Data deposit

DMP editor

10. Prepare a realistic B U D G E T

Software

Hardware

Short-term storage

Long-term storage

Start at monthly

Can we do this?
